

Team 13 Project Charter

OneUp

Team Members

Harris Christiansen, Jeremy Craven, Rajan Dalal, Marty Kausas, Adam Loeb, Nicky Semenza

Problem Statement

Social people crave new outlets for interaction in order to share their lives with friends and strangers. Building off the successful components of sites like Instagram, Yik Yak, and Yelp, we hope to provide a novel new way for friends and rivals alike to show their competitive spirit in a fun, supportive environment. [competitors]

Project Objectives

- Give users an opportunity to show off their talents to friends and strangers
- Let users set high scores for anything, from 'most laps' to 'most socks knit', at a location
- Have a seamless process to upload and view media relating to these scores
- Develop a simple way to connect with your friends and view their accomplishments
- Implement a rating system so only relevant content is viewable by the users
- Allow users to attach a geographical location to their posts

Stakeholders

Users - College students who own Android or iOS smartphones

Developers - Harris Christiansen, Jeremy Craven, Rajan Dalal, Marty Kausas, Adam Loeb, Nicky Semenza

Project Manager - Marty Kausas

Project Owners - Harris Christiansen, Jeremy Craven, Rajan Dalal, Marty Kausas, Adam Loeb, Nicky Semenza

Project deliverables

- An Android and an iOS application to carry out the project objectives using native applications
- A back-end server using node.js and express to facilitate interactions between users and the content they create
- A database to hold all user generated content using mongodb
- A promotional webpage to encourage application use
- Stretch goal: A web app with the same functionality as the mobile apps
